Agro Industrial Parks Food And Agriculture Organization

The FAO Investment Centre provides a wide range of support services to help countries make more and better investments in food and agriculture. This review looks back at the work the Centre carried out with its partners in 2020. Despite a challenging year amid the COVID-19 pandemic, the Centre’s global team supported investment-related policy and sector studies to increase policy dialogue and contributed to the design, technical assistance, supervision or evaluation of investment projects in 120 countries. The Centre increasingly linked both its policy work with investment support to scale up impact. And it promoted greater knowledge sharing and innovation, while also helping to strengthen the capacity of people and institutions to make better investment decisions. The Centre continues to remain relevant by adapting its skills and expertise to keep pace with a constantly evolving investment landscape and fast-changing world and by advocating for more sustainable agri-food systems.

Food chain management research can help in the analysis and redesign of value creation and the product flow throughout the chain from primary producer down to the consumer. The aim is to meet consumer and societal requirements effectively at minimal cost. In the Wageningen UR strategic research program, Agrologistics and Supply Chains (2005-2009), a large number of Wageningen UR research institutes were involved in multi-disciplinary and applied research projects in order to shed light on diverse food supply chain management challenges such as, design of chain strategies, collaboration efficiencies between chain partners, management of risks in chains, innovative modeling concepts and application of information technologies. This book presents the results of this program. It offers a diverse disciplinary spectrum on food
supply chains and its challenges in 15 chapters. It contributes considerably to the advancement of our knowledge on management and control of food supply chains. With the current Second Growth and Transformation Plan (2015-2020), the Government of Ethiopia expects the agro-industrial sector to play key role in economic growth of the Country. Accordingly, the creation of Integrated Agro-Industrial Parks has been identified as one of the key mechanisms for accelerating the development of the sector and the structural transformation of agriculture. Agro-industrial parks will play a significant role in transitioning Ethiopia from an agricultural-led into an industrial-led economy. In view of that, the development of Integrated Agro-Industrial Parks has been prioritized in Ethiopia’s national development strategy and four Agro-Industrial Growth Corridors have been selected for piloting the establishment of four Integrated Agro-Industrial Parks. The initiative aims at driving the structural transformation of the Ethiopian economy while reducing rural poverty and creating a better environment for increased investments in agro-processing and allied sectors. Since 1981, FAO has been a strong partner of the Government of Ethiopia towards the achievement of national food security and economic growth goals. FAO is working closely with the Ministry of Agriculture and Natural Resources to empower value chain actors and to promote inclusive, efficient and sustainable agricultural value chains. The present document is the first one of a series of detailed analyses of prioritized commodities, which will lead to inclusive, sustainable and stronger agricultural value chains in the Agro-Commodities Procurement Zone of the pilot Integrated Agro-Industrial Park in Central-Eastern Oromia. One of the greatest challenges today is to end hunger and poverty while making agriculture and food systems sustainable. The challenge is daunting because of continued population
growth, profound changes in food demand, and the threat of mass migration of rural youth in search of a better life. This report presents strategies that can leverage the potential of food systems to become the engine of inclusive economic development and rural prosperity in low-income countries. It analyses the structural and rural transformations now under way, and examines the opportunities and challenges they present to millions of small-scale food producers. It shows how an “agrototerritorial” planning approach, focused on connecting cities and towns and their surrounding rural areas, combined with agro-industrial and infrastructure development can generate income opportunities throughout the food sector and underpin sustainable and inclusive rural transformation.

Governments have turned to FAO for support in identifying and assessing options for reforming policies on food and agriculture through the “Monitoring and Analysing Food and Agricultural Policies” (MAFAP) programme. While the first phase of FAO’s efforts concentrated more on conducting policy analysis and measuring public expenditures, this second phase built on the first phase’s outcomes to support policy reforms across Southern Asia and sub-Saharan Africa. MAFAP has been found to be an effective and well-positioned influencer of policy reforms in the agricultural sector. However, there are areas of improvement for this programme, including: i) increased resources to better address increasing policy support demand; ii) more strategic planning; iii) more formal institutionalization and more engagement with civil society and the private sector; iv) more coherence at country level in conducting preliminary analysis; and v) improvement to its knowledge management system in order not to lose its institutional memory.

In order to complement the ongoing macroeconomic and safety net reforms in Egypt, it is
important to foster additional sector-specific economic growth, especially in sectors that are good at creating jobs and reducing poverty. One sector that may help foster socioeconomic development in coming years is agriculture and related agro-processing industries. This paper shows that agriculture in Egypt continues to play a relatively important role in the economy compared to other mid-dle income countries. The sector’s stable growth performance has proved to be a reliable contributor to economy-wide output growth over the past decades. The underlying productivity gains have prevented the country’s food import depend-ency ratio from rising in spite of rapidly growing food demand.

The African agricultural and food market is expanding quickly as indicated by World Bank projections that show that the value of Africa’s agriculture and agribusiness industry is expected to more than triple to reach USD 1 trillion by 2030, compared to 2010 (World Bank, 2013). This provides an opportunity to not only boost trade in food and non-food agricultural commodities and services within the continent but also enhance food security in Africa. Regional integration is also gaining momentum as evidenced by progress in the creation of customs unions and the initial steps in setting up a common external tariff at the regional level in a number of regional economic communities (RECs) such as the East African Community (EAC) and the Economic Community of West African States (ECOWAS). The establishment of the African Continental Free Trade Area (AfCFTA) further reinforces the gains achieved in regional integration and opens new market opportunities for farmers and other economic operators. It has been shown that the export of higher value-added products made in Africa is greater in regional markets than in external markets outside Africa, which are typically dominated by raw material exports. However, more than a decade after the adoption of the
Comprehensive Africa Agriculture Development Programme (CAADP) in Maputo in 2003 by the New Partnership for Africa’s Development (NEPAD) in response to the stagnation of African agriculture, Africa continues to remain a marginal player, accounting for only 2.7 percent of world trade in goods and 5 percent of world agricultural trade (Bouët and Odjo, 2019). These figures are likely to trend downwards significantly in the near term due to the economic shock caused by the onset of the COVID-19 pandemic in 2020. The continent currently depends to a significant degree on extra-African sources for imports of food and agricultural products. The share of intra-African agricultural trade has been consistently below 20 percent in recent decades (Bouët and Odjo, 2019; AGRA, 2019). Comparable figures for intraregional agricultural trade are higher for Asia and Europe (more than 60 percent). Residues from agriculture and the food industry consist of many and varied wastes, in total accounting for over 250 million tonnes of waste per year in the UK alone. Biotechnological processing of these residues would allow these waste products to be used as a resource, with tremendous potential. An extensive range of valuable and usable products can be recovered from what was previously considered waste: including fuels, feeds and pharmaceutical products. In this way Biotechnology can offer many viable alternatives to the disposal of agricultural waste, producing several new products in the process. This book presents up-to-date information on a biotechnology approach for the utilisation of agro-industrial residues, presenting chapters with detailed information on materials and bioconversion technology to obtain products of economic importance: The production of industrial products using agro-industrial residues as substrates The biotechnological potential of agro-industrial residues for bioprocesses Enzymes degrading agro-industrial residues and their production Bioconversion
of agro-industrial residues. Written by experts in Biotechnological processing of Agro-Industrial Residues, this book will provide useful information for academic researchers and industry scientists working in biotechnology, waste management, agriculture and the food industry.

Industrialization supported by industrial hubs has been widely associated with structural transformation and catch-up. But while the direct economic benefits of industrial hubs are significant, their value lies first and foremost in their contribution as incubators of industrialization, production and technological capability, and innovation. The Oxford Handbook of Industrial Hubs and Economic Development adopts an interdisciplinary approach to examine the conceptual underpinnings, review empirical evidence of regions and economies, and extract pertinent lessons for policy researchers and practitioners on the key drivers of success and failure for industrial hubs. This Handbook illustrates the diverse and complex nature of industrial hubs and shows how they promote industrialization, economic structural transformation, and technological catch-up. It explores the implications of emerging issues and trends such as environmental protection and sustainability, technological advancement, shifts in the global economy, and urbanization.

The development of competitive agro-industries is crucial for creating employment and income opportunities as well as enhancing the quality of and demand for farm products. Agro-industries can have a real effect on international development by increasing economic growth and reducing poverty in both rural and urban areas of developing countries. However, in order to avoid adverse effects to vulnerable countries and people, sound policies and strategies for
fostering agro-industries are needed. Agro-Industries for Development highlights the current status and future course for agro-industries and brings attention to the contributions this sector can make to international development. The book includes contributions from agro-industry specialists, academic experts and UN technical agencies, chapters address the strategies and actions required for improving agro-industrial competitiveness in ways that can create income, generate employment and fight poverty in the developing world. This book is a co-publication with FAO and UNIDO.

This sourcebook appraises these instruments and considers their nature and objectives, their potential benefits and challenges and the approaches used to implement them. It also examines the practices that have led to both successful and unsuccessful outcomes. The publication provides a comprehensive review of the potential of these tools to enhance value addition, deliver jobs, increase exports and provide markets for new and existing producers in the targeted territories. It notes, however, that implementation of these tools poses a number of challenges. For example, planners and practitioners sometimes use them interchangeably, thus ignoring the specificities of the investments, policies and processes required, and their expected outcomes. The sourcebook concludes that these tools have potential for catalytic impact, but planners need to make sound choices that respect demonstrated principles and follow good practices for effective design and implementation.

The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial
activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today’s global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.

The 39th Annual Meeting of the Donor Committee for Enterprise Development (DCED) was hosted by the Food and Agriculture Organization of the United Nations (FAO) in Rome on the 14th June 2017. The DCED brings together more than 22 bi- and multi-lateral donors, development funds, UN agencies, and private foundations, to explore how to make markets work for the poor. Under the aegis of Annual Meeting, FAO organized a Thematic Day to explore the relevance of small and medium sized agro-food companies (SMAEs) in poverty reduction and the transformation of rural development, inviting representative of small and medium sized enterprises from Uganda and Ethiopia, and academics and experts on finance and agricultural value chain development. This report represents a summary of the proceedings by the FAO organizers of the Thematic Day.

This report is an assessment and strategy to help Kazakhstan enhance the
competitiveness of non-energy sectors including agribusiness, fertilizers, logistics, business services and information technology. Territorial tools for agro-industry development

A SourcebookFood & Agriculture Org.

With the current Second Growth and Transformation Plan (2015-2020), the Government of Ethiopia expects the agro-industrial sector to play key role in economic growth of the Country. Accordingly, the creation of Integrated Agro-Industrial Parks has been identified as one of the key mechanisms for accelerating the development of the sector and the structural transformation of agriculture. Agro-industrial parks will play a significant role in transitioning Ethiopia from an agricultural-led into an industrial-led economy. In view of that, the development of Integrated Agro-Industrial Parks has been prioritized in Ethiopia’s national development strategy and four Agro-Industrial Growth Corridors have been selected for piloting the establishment of four Integrated Agro-Industrial Parks. The initiative aims at driving the structural transformation of the Ethiopian economy while reducing rural poverty and creating a better environment for increased investments in agro-processing and allied sectors. Since 1981, FAO has been a strong partner of the Government of Ethiopia towards the achievement of national food security and economic growth goals.
FAO is working closely with the Ministry of Agriculture and Natural Resources to empower value chain actors and to promote inclusive, efficient and sustainable agricultural value chains. The present document is the second one of a series of detailed analyses of prioritized commodities, which will lead to inclusive, sustainable and stronger agricultural value chains in the Agro-Commodities Procurement Zone of the pilot Integrated Agro-Industrial Park in Central-Eastern Oromia.

Ethiopia has experienced impressive agricultural growth and poverty reduction, stemming in part from substantial public investments in agriculture. Yet, the agriculture sector now faces increasing land and water constraints along with other challenges to growth. Ethiopia’s Agrifood System: Past Trends, Present Challenges, and Future Scenarios presents a forward-looking analysis of Ethiopia’s agrifood system in the context of a rapidly changing economy. Growth in the agriculture sector remains essential to continued poverty reduction in Ethiopia and will depend on sustained investment in the agrifood system, especially private sector investment. Many of the policies for a successful agricultural and rural development strategy for Ethiopia are relevant for other African countries, as well. Ethiopia’s Agrifood System should be a valuable resource for policymakers, development specialists, and others concerned with
economic development in Africa south of the Sahara. This report takes a spatial approach to study Ethiopia’s rural development strategies. It highlights the need to develop stronger and more functional linkages between rural and urban areas. As such, the development of intermediary cities and small urban centres provides large scope for inclusive rural transformation. The report is the result of rigorous analysis, and extensive consultations with national and international stakeholders. It identifies some of the key challenges faced by rural areas and provides a series of recommendations to enhance Ethiopia’s rural development strategies.

This book analyzes the new political economy of land reform in South Africa. It takes a holistic approach to understand South Africa’s land reform, assesses the current policy gaps, and suggests ways of filling them. Due to its cross-disciplinary approach, the book will appeal to a broad audience, and will benefit readers from the fields of policy reform, administration, law, political science, political economics, agricultural economics, global politics, resource studies and development studies.

This study aims to inform the implementation in Ethiopia of the AgrInvest-Food Systems Project, a collaboration between the Food and Agricultural Organization of the United Nations (FAO) and the European Centre for Development Policy
Management (ECDPM) to promote private investment in African food systems that contributes to sustainable development objectives. The study analyses the Ethiopian food system, identifying and explaining notable trends, important socio-economic, food security and nutrition and environmental outcomes generated by the food system, as well as the structural factors, institutions, and actors that shape food system outcomes in Ethiopia.

Agriculture is the dominant primary economic activity in every nook and corner of the developing world. It has great potential for those, who are interested in the spatial distribution of agricultural system. Now the major trust of agriculture geography is on the description, interpretation and explanation of spatial variations of land use, cropping pattern, crop combination, agricultural productivity, agricultural realisation and regional inequalities in agricultural efficiency with the set objective to formulate strategies for the planning and development of agriculture, agro industry and backward areas of the world as well as India. Important Features • Documented with five dozen figures and tables. • Matter is placed in scientific and logical manner. • Subject matter related to agricultural based areas dealt in general and Vaishali region in particular. • Review of the literature, conceptual word and theme related to geography as well as agricultural geography and backward developing areas.
have been comprehensively explained and placed thoroughly. It has been elaborates that how backward and developing areas' regional development and agro industrial activities relates and correlates each other and how positive correlation possible between these two aspect? Structure of agro industrial activities in a backward area and local participation in these activities is important for the development of a backward or developing area or a region. Which system should apply? It has explained enlarge in the reference of agricultural characteristics of Vaishali. Potentiality of local agricultural resources examined very well, on which every developmental system depends. It has been found that without the development of infrastructural network, agro industrial and backward as well as developing area development has never been possible either in third-world countries or developing countries. So in the concluding remarks it has been answered that which type of infrastructural network is necessary for the development of an agro based backward areas. Farming Systems Research has three core characteristics: it builds on systems thinking, it depends on the close collaboration between social and biophysical sciences, and it relies on participation to build co-learning processes. Farming Systems Research posits that to contribute towards sustainable rural development, both interdisciplinary collaborations and local actor engagement
are needed. Together, they allow for changes in understanding and changes in practices. This book gives an overview of the insights generated in 20 years of Farming Systems Research. It retraces the emergence and development of Farming Systems Research in Europe, summarises the state-of-the-art for key areas, and provides an outlook on new explorations, especially those tackling the dynamic nature of farming systems and their interaction with the natural environment and the context of action.

This report summarizes the improved Intermediate Poverty Reduction Strategy Paper (PRSP) of Madagascar, and the new policy orientation of the government. This strategy is based on an objective analysis and precise criteria. It presents the general framework of intervention of the PRSP and an analysis of poverty. It defines the strategies of the fight against poverty, and provides overall objectives and actions to be implemented. It reviews the cost and the financing of the programs and also describes the monitoring and evaluation methods of the poverty reduction strategy.

Ethiopia is a low-income country and agriculture is the mainstay of the economy, accounting for 34 percent of GDP and 70 percent of total employment share. Ethiopia remains one of the world’s poorest countries, despite the significant
progress achieved in reducing poverty and hunger. The Government of Ethiopia through its Growth and Transformation Plan (GTP II) has consistently prioritized the transformation of agriculture from low-input, subsistence-oriented production systems to a fast-growing, intensive and commercially oriented sector to support the country’s aspirations to become a middle-income country by 2025. FAO’s Country Programme Framework (2016-2020), was formulated based on the GTP II. Over the evaluation period (2014-2019), FAO exceeded the resource mobilization targets. Overall, FAO’s programme displays several imbalances and disconnects, specifically between development activities and emergency response. The evaluation calls for FAO to adopt a more cohesive programmatic approach and continue to consolidate its fragmented programme. In the context of the Government’s plans for agricultural transformation, the evaluation also recommends that FAO support an economically sound value chain and market-based approach to agricultural development, while upholding normative values of inclusiveness and ecological sustainability.

Over the next ten years, the African rural space will be the theatre of profound changes as the activities envisaged for agricultural transformation are drastically scaled up. Increased food demand and changing consumption habits driven by demographic factors, such as population growth and urbanization, are already
leading to a rapid increase of net food imports, opening a huge opportunity for the agribusiness sector of many African countries. Against this backdrop and in line with its mission to spur sustainable economic development and social progress, the African Development Bank (AfDB) in 2016 launched Feed Africa, a strategy that is intended to contribute substantially to the transformation of African agriculture by 2025, and to reverse Africa's dependence on imported foods. As part of this strategy, AfDB is promoting the concept of staple crops processing zones (SCPZs), which are agro-based spatial development initiatives, designed to concentrate agro-processing activities within areas of high agricultural potential to boost productivity and integrate the production, processing and marketing of selected commodities. As essential components, SCPZs include an agro-processing hub, a number of agricultural transformation centres (ATCs) and agricultural production areas. The ATCs are designed to link smallholder farmers to the agro-processing hub and are strategically located in high production areas, with the aim of serving as aggregation points to accumulate products from the community to supply the hub for further value addition, or to send them to centres of great demand for distribution and retail to consumers. This study has attempted to assess the feasibility and applicability of the ATC concept to selected regions in Zambia, Côte d'Ivoire and the United
Republic of Tanzania. Findings from the field have demonstrated the potential of ATCs to address community needs and constraints for a range of selected value chains, and have helped to identify different ATC models that could work in each specific context.

Food Systems for an Urbanizing World is a joint report prepared by the World Bank and FAO. It aims to stimulate discussion and suggest pathways to support local and national governments, and civil society and private sector actors in their efforts to improve the performance and capacity of food systems. The report describes the diversity and ever-changing nature of food systems, with interlinked traditional, modern and informal channels that respond to different market segments and different consumer preferences. It also underscores the importance of targeting support to the type of city and food system. The task is not an easy one. Data are weak and empirical analysis is weaker. As cities’ engagement in urban food issues is relatively new, the institutions, governance mechanisms and capacities needed for effective design, implementation and delivery of this agenda must be strengthened. Finding effective ways to prioritize, mobilize and coordinate contributions from multiple sectors will be essential for achieving food system goals.

The only monarchy in North Africa, Morocco has one of the more diversified GDP
mixes in the region, and the mainstays of the economy include agriculture, tourism, and the textiles industry; higher-end manufacturing, IT and communications, and outsourcing are also all becoming increasingly important. The past few years have seen some significant changes, yet the kingdom has remained stable, even amidst the broader regional turmoil. After 2.7% growth in 2012, economic activity in Morocco ramped up in 2013, increasing by 4.4% as GDP hit Dh864.6bn (€76.8bn), driven in large part by the agricultural sector. The kingdom faces exogenous challenges – such as low external demand and high commodity prices – as well as domestic complications including a fiscal deficit and unemployment, but following the government reshuffle in mid-2013, the prospects look far more positive. With the 2014 budget setting a more dynamic tone as the government takes steps to redress key fiscal imbalances, there are strong indicators pointing to the economy’s ability to continue to grow.

Egypt is one of Africa’s industrial heavyweights. Transforming the country's economy to sustain job-rich and sustainable growth are pivotal steps in its march towards prosperity. Today’s search for new development models, accelerated by the unfolding of the COVID-19 pandemic, calls for shifting up a gear in raising Egypt’s industrial capabilities to compete in an industry 4.0 and agro 4.0 landscape. The Production Transformation Policy Review (PTPR) of Egypt uses
a forward-looking framework to assess the country's readiness to embrace change. This includes an analysis of the game-changing potential of the African Continental Free Trade Area (AfCFTA) and perspectives on agro-food and electronics (i.e. what in Egypt is referred to as part of the engineering sector), as well as identifying priorities for future reforms. This review is the result of government-business dialogue, and benefited from peer learning from Italy and Malaysia. It also resulted from international and multi-stakeholder knowledge sharing through a dedicated Peer Learning Group (PLG) and the OECD Initiative for Policy Dialogue on Global Value Chains, Production Transformation and Development.

This year’s edition of the Africa Regional Overview of Food Security and Nutrition reports that the food security situation on the continent continues to worsen. For Africa, 20.4 percent of the continent’s population – 257 million people – are undernourished, up from 19.7 in 2016 – 241 million people. In sub-Saharan Africa, there are 237 million undernourished in 2017, up from 222 million in 2016. The worsening situation in Africa is due to difficult global economic conditions and, in many countries, conflict and climate-related disasters, sometimes in combination. Economic growth slowed in 2016 due to weak commodity prices, in particular for oil and minerals. Food insecurity has
worsened in countries affected by conflict, often exacerbated by drought or floods, and in Southern and Eastern Africa many countries have been adversely affected by prolonged drought. Notably, several countries have achieved sustained progress in reducing food insecurity in the face of challenging circumstances. The deterioration of the food security situation and the lack of progress towards the WHO global nutrition targets makes it imperative for countries to step up their efforts, if they are to achieve a world without hunger and malnutrition by 2030. The need for greater efforts also emerges clearly from the findings of the inaugural biennial review of progress in implementing the goals of the Malabo Declaration. In addition to specific food security and nutrition policies, this year’s report reviews four important cross-cutting topics, namely, youth employment, remittances, intraregional trade, and climate change. It highlights their interplay with the food system and their role in food security and nutrition. The thematic part of the report presents an evidence-based assessment of the threat posed by more frequent occurrences of climate extremes and rising climate variability to food security and nutrition in the region. Climate change in combination with poor development planning, poverty and environmental degradation increases the risk of a climate event becoming a disaster. A collective approach that combines climate change adaptation with
disaster resilient development is an opportunity to address climate and disaster risks within the context of broader development goals. The book has been prepared by authors from different international organizations – including FAO, IFPRI, UNCTAD and ECLAC, as well as legislators and academics from prestigious Latin American universities – seeking to foster reflections for the Global Food Systems Summit, to be held in September 2021. It contextualizes the region’s food systems within a post COVID-19 pandemic scenario and raises new challenges (and opportunities) for policy makers, decision makers, the private sector, and the general public. Likewise, it offers important reflections on sustainability, from production to consumption, with the call to promote better governance of the global and regional food system. In order to face what some authors have deemed “the Syndemic of the century”, the participation of companies, research centres, academia, NGOs, government agencies and international organizations will be necessary.

With the current Second Growth and Transformation Plan (2015-2020), the Government of Ethiopia expects the agro-industrial sector to play key role in economic growth of the Country. Accordingly, the creation of Integrated Agro-Industrial Parks has been identified as one of the key mechanisms for accelerating the development of the sector and the structural transformation of
agriculture. Agro-industrial parks will play a significant role in transitioning Ethiopia from an agricultural-led into an industrial-led economy. In view of that, the development of Integrated Agro-Industrial Parks has been prioritized in Ethiopia’s national development strategy and four Agro Industrial Growth Corridors have been selected for piloting the establishment of four Integrated Agro-Industrial Parks. The initiative aims at driving the structural transformation of the Ethiopian economy while reducing rural poverty and creating a better environment for increased investments in agro-processing and allied sectors. Since 1981, FAO has been a strong partner of the Government of Ethiopia towards the achievement of national food security and economic growth goals. FAO is working closely with the Ministry of Agriculture and Natural Resources to empower value chain actors and to promote inclusive, efficient and sustainable agricultural value chains. The present document is the fourth one of a series of detailed analyses of prioritized commodities, which will lead to inclusive, sustainable and stronger agricultural value chains in the Agro-Commodities Procurement Zone of the pilot Integrated Agro-Industrial Park in Central-Eastern Oromia.

This paper evaluates Ethiopia’s urbanization trend during the last four decades, while also considering Ethiopia’s structural transformation and recent public
investments to promote greater industrialization within the country. Ethiopia’s
city population grew 4.2 percent per year between 1994 and 2015, far
outpacing the overall population growth rate of 2.5 percent. Compared to the
urban growth rate of Africa (3.5 percent per year), Ethiopia experienced a 20
percent faster urban population growth rate (UNDESA 2015). Urbanization in
Ethiopia is expected to reach 38 percent by 2050. However, this level is relatively
low compared to the majority of sub-Saharan Africa (SSA) countries. Improved
road infrastructure, rural to urban migration and secondary city development is
increasing urbanization within the country. In addition, recent public investments
to promote industrialization and increase manufacturing labor opportunities via
newly constructed and planned industrial parks are projected to increase
urbanization and bolster structural transformation across the country. We
evaluate these investments and demographic trends within the context of other
countries in sub-Saharan Africa, as well as with the experience of India and
China. Ethiopia’s investment in higher-value manufacturing and service activities
via economic zones may provide similar infrastructure to that of China and
India’s ‘township and village enterprises’ (TVE). However, a focus on
increasing human capacity and labor mobility will be necessary to ensure that
rural farmers are able to take advantage of labor opportunities outside of the
agriculture sector. We calculate the projected economic impact of Ethiopia’s planned industrial zones and sugar factories and find that while public and private investment in industrial and agro-industrial parks may provide a catalyst for future growth, they are likely to provide only a small share of total output and employment. Investments in sugar factories are anticipated to total USD 5.2 billion, with estimated production of USD 3.6 billion and value-added of USD 3.3 billion. However, an increase in sugar output of this magnitude would imply massive sugar exports that may not be financially profitable.

The development of competitive agro-industries is crucial for creating employment and income opportunities as well as enhancing the quality of and demand for farm products. This book addresses strategies required for improving agro-industrial competitiveness in ways that can generate employment and fight poverty in the developing world.
