Development Across The Life Span 7th Edition

This interdisciplinary volume presents international research and theories focusing on the development of the individual across the life span. Centering on "family" as the key context influencing, and being influenced by the developing person, the contributors to this volume discuss an array of theoretical models, methodological strategies, and substantive foci linking the study of individual development, the family system, and the broader context of human development. The volume presents continuing empirical research and theories in the realm of individual and family development and features a developmental, contextual view from a process-oriented vantage point.

All of the lifespan without all of the bells and whistles. This chronologically-organized text is less expensive and briefer than most Lifespan texts. Its numerous examples drawn from education, nursing, and psychology make the content relevant to students from a variety of majors and backgrounds, while a highly praised study guide integrated into the text promotes and reinforces conceptual understanding.

A group of internationally renowned scholars discuss their research on motivation.

This handbook presents the latest theories and findings on parenting, from the evolving roles and tasks of childrearing to insights from neuroscience, prevention science, and genetics. Chapters explore the various processes through which parents influence the lives of their children, as well as the effects of parenting on specific areas of child development, such as language, communication, cognition, emotion, sibling and peer relationships, schooling, and health. Chapters also explore the determinants of parenting, including consideration of biological factors, parental self-regulation and mental health, cultural and religious factors, and stressful and complex social conditions such as poverty, work-related separation, and divorce. In addition, the handbook provides evidence supporting the implementation of parenting programs such as prevention/early intervention and treatments for established issues. The handbook addresses the complementary role of universal and targeted parenting programs, the economic benefits of investment in parenting programs, and concludes with future directions for research and practice. Topics featured in the Handbook include: · The role of fathers in supporting children's development. · Developmental disabilities and their effect on parenting and child development. · Child characteristics and their reciprocal effects on parenting. · Long-distance parenting and its impact on families. · The shifting dynamic of parenting and adult-child relationships. · The effects of trauma, such as natural disasters, war exposure, and forced displacement on parenting. The Handbook of Parenting and Child Development Across the Lifespan is an essential reference for researchers, graduate students, clinicians, and therapists and professionals in clinical child and school psychology, social work, pediatrics, developmental psychology, family studies, child and adolescent psychiatry, and special education.

This volume derived from original presentations given at a conference in Atlanta, Georgia, under the auspices of the Center for Child Well-Being. Scholars, practitioners, public health professionals, and principals in the child development community convened to address a science-based framework for elements of well-being and how the elements might be developed across the life course. Integrating physical, cognitive, and social-emotional domains, Well-Being is the first scientific book to consider well-being holistically. Focusing on a set of core strengths grouped within these three domains, the book also includes a fourth section on developmental strengths through adulthood that broadly examines a continuum of health and development, as well as transitions in well-being. This volume takes a developmental perspective across the life course, describing foundational strengths for well-being--the capacities that can be actively developed, supported, or learned. These foundational strengths--problem solving, emotional regulation, and physical safety--are the positive underpinnings of early child health and development, as well as ongoing well-being across the life course. Working together and blending their respective disciplinary perspectives and expertise, 53 experts in psychology, sociology, child development, and medicine have contributed to the book.

This book offers insights from a seven-year study into the impact of English as an International Language at a national level, from the effect of rich English input on a previously monolingual people's linguistic repertoire to its effect on the situated language use demanded of speakers who find themselves in a new linguistic environment for which they have not been prepared. The changes described in the book have occurred in a speech community that identifies strongly with the local language, but finds itself increasingly having to use another language to perform daily functions in education and work. Findings describe how the official language and educational policies have not addressed this new linguistic ecology of Iceland. The findings of these studies have larger international practical, educational, empirical, and theoretical implications and should be relevant to anyone interested in the impact of English as an International Language.

This book provides introductory coverage of growth and development throughout the lifespan. The content emphasizes normal aspects as well as the unique problems and health promotion needs of each age and stage of development. It features a strong health promotion theme structured around Healthy People 2020 objectives. Lifespan coverage from prenatal development to death helps students integrate concepts related to normal changes in each stage of the life cycle. Coverage of current research and trends in health care provide readers with the most up-to-date, accurate information. Health promotion and disease prevention, including Healthy People 2020 objectives, are highlighted throughout the book. Cultural content is highlighted throughout the book and in new Chapter 3: Cultural Considerations in Health Care to encourage students to consider cultural implications at every stage of development. Separate chapter on advanced old age and geriatrics (Chapter 14) discuss the theories, physiological changes, and psychological aspects of aging; health promotion and maintenance; and the role of health care providers in caring for the geriatric patient. All of this helps students understand how to maintain quality of...
life and promote health in advanced old age. Teaching techniques for every developmental stage are part of a consistent chapter format and provide age-appropriate patient education tips. Consistent chapter organization for each stage of growth and development makes information easy to access. Critical Thinking scenarios and questions appear at the end of each chapter to help students consider all variables when planning care across the lifespan. Student learning features include Objectives, Key Terms, Key Points, and Review Questions. Appendix A includes the FDA's Recommended Child and Adult Immunization Schedules, providing essential health promotion information. NEW Appendix B provides a Multilingual Glossary of Symptoms to enhance students' awareness of culturally sensitive care. Glossary includes definitions of Key Terms and additional terms help students review concepts and terminology at a glance. Bibliography is organized by chapter at the end of the book to facilitate additional research and study. Emphasizes normal development and function, examining how function is attained and how it can be optimized across the life span. Logical organization and presentation equips readers with the background and tools needed to understand the components of functional movement. This chronologically-organized text's succinct coverage and examples that relate effectively to education, nursing, and psychology majors has made this book a favorite with professors and students. Along with updated citations and examples, this edition includes increased coverage of exceptional individuals, thoroughly revised adulthood chapters, and increased integration of web and media resources.

This edited volume integrates research on people's relationships from childhood to later adulthood.
Recipient of the 2017 Most Promising New Textbook Award from the Textbook & Academic Authors Association (TAA) Chronologically organized, Lifespan Development: Lives in Context offers a unique perspective on the field by focusing on the importance of context—examining how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow and change. Author Tara L. Kuther integrates cutting-edge and classic research throughout the text to present a unified story of developmental science and its applications to everyday life. Robust pedagogy, student-friendly writing, and an inviting design enhance this exciting and inclusive exploration of the ways in which context informs our understanding of the lifespan.

Intraindividual variability (IIV) of human development and behavior across the entire life-span is explored in this new book. Leading researchers summarize recent findings on the extent, role, and function of IIV in human development with a focus on how, when, and why individuals change over time. The latest theoretical, methodological, and technological advances are reviewed. The book explores the historical and theoretical background and challenges of IIV research along with its role and function in childhood, adolescence, and adulthood. Edited to maximize consistency and accessibility, each chapter includes an introduction and a review of the research and most explore future directions, new theoretical developments, and conclusions and implications. Readers are shown that by focusing on the individual as a unit of analysis across different time scales, conditions, and situations, researchers can effectively demonstrate behavioral and developmental regularities at different points of the life-span. As such this book is a must have for anybody interested in IIV research. The book explores:
- New designs and methods for the analysis of intensive repeated measures data.
- The importance of real-time data for more time sensitive and ecologically valid measurements.
- The role and function of intraindividual variability in behavior and development across the life-span -- from infancy to later life.
- Numerous examples of how intraindividual variability research is conducted.
- Topics and findings that are commonly treated in disparate bodies of literature from various disciplines. Part 1 provides a historical, conceptual, and methodological overview of the study of intraindividual variability (IIV). IIV during childhood and adolescence and its application in the investigation of development of language acquisition, infant-parent interactions, development of motor skills, cognitive development, mood regulation, and identity development are examined in Part 2. Part 3 focuses on IIV during adult development, including its use in neuropsychological functioning and attention and in personality development and mood regulation. IIV in the context of adults' health behavior is also reviewed. Part 4 examines the questions and challenges of IIV research in human development such as whether IIV in adult development is an indicator of vulnerability or resilience, the association between short-term IIV and long-term developmental change, and multiple time-scale design and analysis. The book concludes with a look at the future of intraindividual variation analysis. Intended for advanced students and researchers in developmental psychology across the life-span, social, personality, and health psychology, as well as sociology, family studies, gerontology, education, and medicine, interested in intraindividual variability of behavior and its role in human development, this book also serves as a text for graduate courses on longitudinal analysis, multilevel modeling, and/or (advanced) data analysis offered in these departments. Knowledge in human development or life course sociology and graduate-level statistics is recommended.

Lifespan human development is the study of all aspects of biological, physical, cognitive, socioemotional, and contextual development from conception to the end of life. In approximately 800 signed articles by experts from a wide diversity of fields, The SAGE Encyclopedia of Lifespan Human Development explores all individual and situational factors related to human development across the lifespan. Some of the broad thematic areas will include: Adolescence and Emerging Adulthood Aging Behavioral and Developmental Disorders Cognitive Development Community and Culture Early and Middle Childhood Education through the Lifespan Genetics and Biology Gender and Sexuality Life Events Mental Health through the Lifespan Research Methods in Lifespan Development Speech and Language Across the Lifespan Theories and Models of Development. This five-volume encyclopedia promises to be an authoritative, discipline-defining resource for students and researchers seeking to become familiar with various approaches, theories, and empirical findings about human development broadly construed, as well as past and current research.

Work Across the Lifespan coalesces lifespan theoretical and lifespan-based empirical perspectives on aging and work. The books examines human development theories that explain patterns of growth, trajectories of change and maintenance of continuities across the entirety of life. Using the implicit focus of these theories on aging as a guide to intra-individual change and goal-based self-regulation processes, the book examines the relationship between work and aging. Drawing upon developmental psychology, life course sociology, microeconomics, and critical gerontology, this authoritative reference brings together the collective thinking of researchers who study aging and working, and aging and careers. Summarizes key tenets of lifespan theories.
Draws upon theories from work and organizational psychology, organizational behavior, and human resources management. Applies theories to work, organizational life and careers. Examines age and work-related processes. Provides an exclusive lifespan focus on work and aging. Focuses on aging as a continuous intra-individual change process. Describes recent thinking on interactive development across the spectrum of competency domains within the individual.

The field of educational neuroscience uses new insights about the neural mechanisms of learning to improve educational practices and outcomes. The first volume to bring together the latest knowledge on the development of educational neuroscience from a life-span perspective, this important text offers state of the art, authoritative research findings in educational neuroscience before providing evidence-based recommendations for classroom practice. Thomas Mareshal, Dumanole and the team of expert international contributors thoroughly explore four main themes throughout the book. The first focus is on individual differences, or what makes children perform better or worse in the classroom. The second is to consider this question at different stages in development, from early years into adulthood. The third part of the book covers cognitive enhancement, summarising research that has investigated activities that might give general benefits to cognition. Finally, contributors consider the translation of research findings into classroom practices, discussing broader ethical issues raised by educational neuroscience, and what teachers need to know about neuroscience to enhance their day-to-day practice. Specific topics explored include neuropsychological perspectives on socioeconomic disparities in educational achievement, reading difficulties, phonological skills, executive function and emotional development. Educational Neuroscience is essential reading for researchers and graduate students of educational psychology, developmental science, developmental psychology, cognitive psychology, especially those specializing in emotion regulation.

Personality Development across the Lifespan examines the development of personality characteristics from childhood, adolescence, emerging adulthood, adulthood, and old age. It provides a comprehensive overview of theoretical perspectives, methods, and empirical findings of personality and developmental psychology, also detailing insights on how individuals differ from each other, how they change during life, and how these changes relate to biological and environmental factors, including major life events, social relationships, and health. The book begins with chapters on personality development in different life phases before moving on to theoretical perspectives, the development of specific personality characteristics, and personality development in relation to different contexts, like close others, health, and culture. Final sections cover methods in research on the topic and the future directions of research in personality development. Introduces and reviews the most important personality characteristics Examines personality in relation to different contexts and how it is related to important life outcomes Discusses patterns and sources of personality development

User-friendly in approach with a variety of pedagogical tools and an abundance of take-home information, this broad, balanced, comprehensive overview of life-span development integrates theories, research, and applications with particular emphasis on relevance to students' lives. Organised chronologically, it covers the entire range of human life from the moment of conception through death and examines both the traditional areas of the field as well as more recent innovations.

For courses in Lifespan Development A compelling blend of lifespan development research and applications Development Across the Life Span provides a chronological overview of human development from the moment of conception through death, examining both the traditional areas of the field and more recent innovations. Author Robert Feldman focuses on how developmental findings can be be applied meaningfully and practically, helping students to recognize the relevance of the discipline to their own lives. Thoroughly updated with the latest data and contemporary examples, the Eighth Edition better engages students in key concepts via recent news items, timely world events, and contemporary uses of lifespan development. MyPsychLab® not included. Students, if MyPsychLab is a recommended/mandatory component of the course, please ask your instructor for the correct ISBN and course ID. MyPsychLab should only be purchased when required by an instructor. Instructors, contact your Pearson representative for more information. MyPsychLab is an online homework, tutorial, and assessment product designed to personalize learning and improve results. With a wide range of interactive, engaging, and assignable activities, students are encouraged to actively learn and retain tough course concepts.

Human Development & Performance Throughout the Lifespan, 2nd Edition is ideal for occupational therapy, physical therapy, and other rehabilitation disciplines. It provides a broad, occupation-based viewpoint of development and performance throughout all life stages with an emphasis on the factors that influence daily participation and optimal performance of desired daily life tasks. The authors use a life course conceptual model as an organizational foundation for clinical reasoning to help readers understand how to implement the activity- and participation-based goals and outcomes for therapy. Written by an occupational therapist and a physical therapist, the book incorporates chapters by leading experts in human development, giving users cutting-edge information and a wide range of perspectives. By integrating information from the International Classification of Function and Disability (ICF) with a developmental life-task perspective, the book gives both newcomers and experienced professionals an essential, contemporary frame of reference. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

For courses in Lifespan Development A compelling blend of lifespan development research and applicationsDevelopment Across the Life Span provides a chronological overview of human development from the moment of conception through death, examining both the traditional areas of the field and more recent innovations. Author Robert Feldman focuses on how developmental findings can be applied meaningfully and practically, helping students to recognize the relevance of the discipline to their own lives. Thoroughly updated with the latest data and contemporary examples, the Eighth Edition better engages students in key concepts via recent news items, timely world events, and contemporary uses of lifespan development. MyPsychLab is an online homework, tutorial, and assessment product designed to personalize learning and improve results. With a wide range of interactive, engaging, and assignable activities, students are encouraged to actively learn and retain tough course concepts. Both implicit and existential meaning are important constructs in fully understanding human experience. The editors of this volume present a forum for an array of viewpoints and recent research that address the notion of optimal human growth.

Social Cognition brings together diverse and timely writings that highlight cutting-edge research and theories on the development of social cognition and social behavior across species and the life span. The volume is organized according to two central themes that address issues of continuity and change both at the phylogenetic and the ontogenetic level. First, the book addresses to what extent social cognitive abilities and behaviors are shared across species, versus abilities and capacities that are uniquely human. Second, it covers to what extent social cognitive abilities and behaviors are continuous across periods of development within and across the life span, versus their change with age. This volume offers a fresh perspective on social development and includes the relationship between motor development and cognitive and social development. It explores factors affecting development, including effects of early stimulation and deprivation. The book addresses assessment in motor development.

Development Across the Life Span, Global Edition

For courses in Lifespan Development A compelling blend of lifespan development research and applications Revel(TM) Development Across the Life Span provides a chronological overview of human development from the moment of conception through death, examining both the traditional areas of the field and more recent innovations. Author Robert Feldman focuses on how developmental findings can be applied meaningfully and practically, helping students to recognize the relevance of the discipline to their own lives. Thoroughly updated with the latest research and contemporary examples, the 9th Edition better ensures that students make connections between course concepts and their own lives and future careers. Revel is Pearson's newest way of delivering our respected content. Fully digital and highly engaging, Revel replaces the textbook and gives students everything they need for the course. Informed by extensive research on how people read, think, and learn, Revel is an interactive learning environment that enables students to read, practice, and study in one continuous experience -- for less than the cost of a traditional textbook. NOTE: Revel is a fully digital delivery of Pearson content. This
ISBN is for the standalone Revel access card. In addition to this access card, you will need a course invite link, provided by your instructor, to register for and use Revel. This is the third book in a series of Across the Life Span volumes that has come from the Biennial Life Span Development Conferences. The authors—well known in their fields—present theoretical and research issues important for the understanding of temperament in infancy and childhood, as well as personality in adolescence and adulthood. Current findings placed within theoretical and historical contexts make each chapter distinctive. The chapter authors focus on their work and its implications for temperament and personality issues across the life span. In addition, they include summaries of research by other investigators and theorists, placing their work and that of others in a lifespan perspective.

A practically focused guide to effective counseling of all clients Human Development Across the Life Span is a practical guide to human growth and development, moving beyond theory to include real-world applications for counselors who work with clients. Written by recognized authorities in mental health counseling and counselor education, this book is fully aligned with the American Counseling Association's accreditation standards and includes contributions by well-known and respected academics and practitioners. Based on an extensive review of course syllabi across CACREP-accredited programs, this book is organized to follow the way courses are typically taught and follows a consistent structure including pedagogical elements that help students learn. After a thorough examination of essential concepts and theories of life span development, the book moves through each stage of human growth and development to provide expert insight, short case studies, and practical applications to counseling. The full Instructor's package provides a useful set of tools, including a Respondus test bank, PowerPoint slides, and an Instructor's Manual. This book is the only text on human growth and development that emphasizes the key implications and applications for counselors, providing useful information and the insights of real experts in each subject area. Understand the developmental milestones at each life stage Appreciate clients' perspectives to better facilitate appropriate interventions Work more effectively with clients of any age, from toddlers to seniors Tailor your approach to meet the unique needs and abilities of each life stage As a counselor, you cannot approach a child's therapy the same way you approach an adult's. Even within each major category, each developmental stage includes a nuanced set of characteristics that, considered appropriately, will inform a more effective treatment plan.

Human Development Across the Life Span is a comprehensive guide to understanding all of your clients, and providing the type of counseling that facilitates more positive outcomes.

Providing a solid foundation in the normal development of functional movement, Functional Movement Development Across the Life Span, 3rd Edition helps you recognize and understand movement disorders and effectively manage patients with abnormal motor function. It begins with coverage of basic theory, motor development and motor control, and evaluation of function, then discusses the body systems contributing to functional movement, and defines functional movement outcomes in terms of age, vital functions, posture and balance, locomotion, prehension, and health and illness. This edition includes more clinical examples and applications, and updates data relating to typical performance on standardized tests of balance. Written by physical therapy experts Donna J. Cech and Suzanne "Tink" Martin, this book provides evidence-based information and tools you need to understand functional movement and manage patients' functional skills throughout the life span. Over 200 illustrations, tables, and special features clarify developmental concepts, address clinical implications, and summarize key points relating to clinical practice. A focus on evidence-based information covers development changes across the life span and how they impact function. A logical, easy-to-read format includes 15 chapters organized into three units covering basics, body systems, and age-related functional outcomes respectively. Expanded integration of ICF (International Classification of Function) aligns learning and critical thinking with current health care models. Additional clinical examples help you apply developmental information to clinical practice. Expanded content on assessment of function now includes discussion of participation level standardized assessments and assessments of quality-of-life scales. More concise information on the normal anatomy and physiology of each body system allows a sharper focus on development changes across the lifespan and how they impact function.

Choice Recommended Read Leo B. Hendry is one of the foremost developmental psychologists of his generation. His diverse range of interests have included studies on young people's involvement in competitive sports, investigations into teacher and pupil relations in school, adolescents' leisure pursuits and their family relations, parenting styles, youth workers and mentoring, youth unemployment, adolescent health behaviours, and transition to early adulthood. His research interests now include work on ageing and retirement. Developmental Transitions across the Lifespan is the first collection of Hendry's works, and essentially joins the dots to provide an overarching perspective on lifespan development through a dynamic systems theory approach. Underpinned by empirical research, this collection of journal articles and book chapters is linked by a contemporary commentary which not only contextualises each piece within today's research climate, but builds to provide an unorthodox, comprehensive but above all compelling perspective on human development from childhood to old age. Leo B. Hendry's research output has been significant and influential. This is an important book that will provide students and researchers in developmental psychology not only with an opportunity to view his contribution holistically, but in connecting his range of research interests, provides a new contribution to our understanding of lifespan development in its own right.

Here's just what you need to effectively care for your patients at any stage of life in today's ever-changing world of health care. Elaine Polan and Daphne Taylor guide you through the life cycle—from conception to old age—with an emphasis on health promotion, maintenance, and restoration in clinical practice. 0135013882 / 9780135013887 Development Across the Life Span Value Package (includes Observation CD for Development Across the Life Span) Package consists of: 0136016103 / 9780136016106
Executive Function: Development Across the Life Span presents perspectives from leading researchers and theorists on the development of executive function from infancy to late adulthood and the factors that shape its growth and decline. Executive function is the set of higher-order cognitive processes involved in regulating attention, thoughts, and actions. Relative to other cognitive domains, its development is slow and decline begins early in late adulthood. As such, it is particularly sensitive to variations in environments and experiences, and there is growing evidence that it is susceptible to intervention – important because of its link to a wide range of important life outcomes. The volume is made up of four sections. It begins with an overview of executive function’s typical development across the lifespan, providing a foundation for the remainder of the volume. The second section presents insights into mechanisms of executive function, as provided by a variety of methodological approaches. The third and fourth sections review the current research evidence on specific factors that shape executive function’s development, focusing on normative (e.g., bilingualism, physical activity, cognitive training) and clinically relevant (e.g., substance use, neurodegenerative disease) developmental pathways.

Social skills are critical to psychological adjustment across the lifespan. These skills are necessary for attaining a variety of important social, emotional, and interpersonal goals. Social skill deficits and resulting negative social interactions are associated with a wide variety of adjustment problems and psychological disorders. Social Skills across the Life Span: Theory is a comprehensive social skills volume providing in-depth coverage of theory, assessment, and intervention. Divided into three major sections, the volume begins with the definition of social competence, developmental factors, and relations to adjustment. This is followed by coverage of general assessment and intervention issues across the lifespan. In the third section, program developers describe specific evidence-based interventions. Identifies how social skills influence social competence and well Addresses the full lifespan Reviews methods to assess and intervene with children and adults Details evidence-based interventions for children and adults
